

Greetings

Izuru UMEHARA

President, Yokohama National University
Chairman, Partnership KT for Diversity

Yokohama National University, as the representative, and its collaborative organizations, Taisei Corporation and Teijin Limited, work together to conduct a project for the promotion of diversity, funded by the Ministry of Education, Culture, Sports, Science and Technology-Japan (MEXT) under the scheme, "Initiative for Realizing Diversity in the Research Environment (Collaboration Type)."

The project aims to establish a diverse research environment as well as to promote activities run by women scientists and engineers through regional cooperation and collaboration among various types of institutions.

To enforce the project, we formed the "Partnership KT for Diversity" (shortly "Diversity KT"), which comprises industries, governments, and research institutions based in Kanagawa or Tokyo. Our mission is listed below and we plan to conduct multiple projects to achieve it.

Our Mission

目標

1. To establish a diverse research environment that ensures work-life balance.
2. To conduct an industry-government-academia joint research to enhance women researchers' skills and to provide them career development opportunities.
3. To foster women scientists' and engineers' career prospects.

Promote work-life balance.

We aim to establish a research environment that ensures work-life balance and diversity. The society is made up of a wide variety of people, and each way of life as well as life stage has to be respected for sustainable development. We also introduce our progress and achievements through our website and local media, to contribute to the realization of a diversity research environment in and around Yokohama. To that end, we actively cooperate with domestic and overseas institutions.

Conduct joint research.

We aim to conduct joint research projects on "life innovation", which entails creating and implementing new mechanisms and to generate changes in society through research related to survival such as medical science, life science, and research in the field of integrated arts and sciences that contributes to the enrichment of our lives. Collaborative research promotes women researchers' cross appointments and research projects conducted by women principal investigators.

* "Cross-appointment" is a system that allows researchers to engage in R&D and education at two or more institutions. (From the definition of METI)

Foster researchers and engineers.

We aim to enhance women researchers' research capabilities and enable moving-up to higher-level appointments with the cross-appointment system and various research projects.

In addition, we implement the research supporter system for researchers during life events and encourage recurrent education for engineers at companies. We also hold educational events to help students choose their future careers.
